PROFESSIONAL SUMMARY

Working with operational and performance data taught me that the real value of data lies in solving business problems, not just building models. I bring 3+ years of experience analysing data, developing dashboards, automating reporting workflows, and delivering insights that support decision-making. Combined with an MSc in Data Science, I have applied machine learning, predictive analytics, and statistical techniques across financial risk, behavioural analytics, and forecasting projects to transform complex data into actionable business outcomes.

TECH STACK

Programming & Analysis:	Python (Pandas, NumPy), SQL, Jupyter
Machine Learning:	Supervised & Unsupervised Learning, Model Selection, Evaluation, scikit-learn, PyTorch, TensorFlow
Statistical Methods:	Hypothesis Testing, A/B Testing Concepts, Experimental Design, Probability, Feature Engineering
Advanced ML:	NLP, Time Series Forecasting, Recommendation Systems, Representation Learning, Generative AI Concepts
Model Deployment:	ETL pipelines, model monitoring, data preprocessing, multi-source integration, workflow automation, maintainable code practices, MLOps fundamentals, GCP AI platform
Visualisation:	Power BI, Tableau, Matplotlib
Cloud:	GCP, Azure
Software Engineering:	Debugging, maintainable code practices, version control fundamentals
Business Skills:	Stakeholder Communication, Requirements Gathering, Insight Generation

WORK EXPERIENCE

Wipro Limited <i>Data & Analytics Analyst (PMO)</i>	<i>Hyderabad, India</i> <i>Aug 2021 – Aug 2024</i>
---	---

- Applied data-driven analytical frameworks across 7+ global programmes, improving delivery performance by 15% through enhanced visibility and insight generation.
- Queried and analysed large operational datasets using SQL and Excel to identify trends, anomalies, and performance bottlenecks across project portfolios.
- Designed hypothesis-driven analyses to investigate delivery risks and validate performance assumptions, supporting data-informed decision making.
- Developed dashboards (Power BI, SQL, Excel) translating complex multi-source data into actionable insights for senior stakeholders.
- Collaborated with cross-functional teams to define KPIs and translate business problems into structured analytical requirements.
- Automated reporting workflows and built scalable data pipelines to improve data quality, consistency, and reporting efficiency.
- Communicated analytical findings clearly to non-technical stakeholders, influencing strategic and operational decisions.

PROJECTS

Fraud Detection Modelling — Credit Card Transactions

- Developed predictive machine learning models (Logistic Regression, Random Forest, XGBoost) on highly imbalanced financial transaction data using SMOTE for class balancing.
- Evaluated model performance using precision, recall, F1-score, and ROC-AUC to optimise trade-offs between fraud detection accuracy and customer experience.
- Designed with real-world financial risk considerations and production-oriented evaluation metrics to reflect operational fraud detection challenges.
- Applied a hypothesis-driven analytical approach to identify fraudulent transaction patterns and support data-driven decision-making.

Self-Supervised Behavioural Representation Learning

- Built an end-to-end machine learning pipeline on 540,000+ time-series records, transforming raw movement data into structured features for modelling.
- Developed a 1D CNN Autoencoder (PyTorch) to learn latent representations, enabling pattern discovery without labelled data.
- Applied clustering (MiniBatchKMeans) to identify 23 behavioural patterns, generating insights from complex, high-dimensional datasets.

- Designed experiments to evaluate embedding quality using dimensionality reduction (t-SNE, UMAP) and similarity metrics.
- Structured the pipeline for scalability and reproducibility, preparing it for potential deployment in real-time behavioural monitoring systems.

Crop Yield Prediction

- Built a predictive modelling pipeline integrating 17 multi-source datasets (68k records) using Python and SQL-based preprocessing.
- Developed an MLP model achieving $R^2 \approx 0.95$, demonstrating strong generalisation across geographies.
- Performed feature engineering, validation, and structured experimentation to improve model performance and robustness.

EDUCATION

University of Sussex

2024 - 2025

MSc Data Science

Vignan Institute of Engineering for Women

B.Tech Electronics and Communication Engineering

CERTIFICATIONS

- GCP AI & ML
- Microsoft Azure Fundamentals (AZ-900)
- Data Analytics — KPMG
- Agile — JP Morgan
